Bühler in partnership with processors. An integral part of fruit and vegetables processing.

Bühler is a leading global supplier of optical sorting solutions to the food and non-food processing industries and has been at the forefront of pioneering optical sorting technology since 1947.

With a commitment to substantial investment in research and development, Bühler’s proprietary sorting technology delivers excellent results in removing the most challenging defects and foreign materials in a wide range of applications.

Fresh and frozen fruit and vegetable processors can be confident of world-class performance when placing Bühler’s optical sorters in their processing line whether before blanching, after blanching, after IQF or in the packing line.

**Key benefits**

- The most hygienic optical sorters, lowering the risk of contamination
- Unprecedented defect and foreign material detection
- Industry leading optical sorting technologies
Serious about food safety. 
Simplifying your most challenging sort.

Carrots

Major and minor colour defects such as white, green and dark blemishes as well as foreign materials including stones, insects, mice, plastic, wood, glass and cardboard can be moved from a variety of fresh and frozen carrot applications.

Peas

All types of colour defects ranging from yellow, blond, khaki and nightshades are removed with ease using Bühler’s advanced and custom-built colour cameras. Foreign materials and Extraneous Vegetable Matter (EVM) such as pods, sticks, insects, snails, flower heads, mice, snakes, woods, plastic, glass and stones can be removed without any adjustment to the sorter.

Vegetable mixes

Typical defects removed include packaging materials such as wood, cardboard and plastic as well as missed EVM so processors can be confident of top quality produce prior to packing.

Accept | Reject
Raspberries

Defects such as white, pink, green, mouldy or soft raspberries as well as foreign materials including insects, snails stems, attached stems, glass and plastic are removed with high efficiency without compromising the valuable, fragile produce.
Flexible optical sorting solutions. At all stages of the process line.

Before Blanching
Before blanching, SORTEX® sorters are used to remove colour defects, extraneous vegetable matter (EVM) and field foreign material to save processing resources further down the line ensuring higher line capacities can be achieved.

After Blanching
Colour defects can often be enhanced during the blanching stage and SORTEX® sorters are well equipped to ensure that any remaining product deformities are removed. A robust sorting solution prior to the freezing stage, including before blanching and after blanching, is essential to reduce the risk of microbiological contamination.
In the frozen state, SORTEX® sorters are equipped with technologies to remove the more subtle colour defects as well as any remaining shape deformities. They are also perfectly suited for bulk to bulk cleaning processes for the removal of missed EVM, field foreign material (FM) and packaging FM.

At the final stage of the process, there is a risk of packaging FM such as wood, plastic and cardboard entering the product stream. SORTEX® sorters in the packing line are optimised to detect a wide range of foreign materials in just one simple set-up to ensure top quality produce that is safe to eat is achieved every time.
SORTEX® K

The SORTEX K range uses a cutting-edge, double sided detection system to remove the most challenging defects in canned or fresh applications. The high capacity sorter is able to inspect product in a blanched or unblanched state and can be equipped with PROfile™ (shape) technology for outstanding detection of EVM to remove hazardous foreign materials. The SORTEX K also features a hygienic, stainless steel frame with IP56 protection.

- 12.1 inch user-friendly touch screen interface
- Custom-built colour cameras
- 1200mm viewing width
- PROfile™ technology
- 256 high speed, high flow ejectors
- Powerslide™ Conveyor
- Pre-set sorting modes
- External USB port for data retrieval
- ProSortX™ operating software
Process highlight.

After IQF and in the packing line.

The new SORTEX F range of optical sorters for frozen fruit and vegetable processors pushes the boundaries in hygienic design with the most open and accessible frame the market has ever seen. Available in two frame sizes the SORTEX F is perfect for small to large processors seeking maximum food safety and quality.

Combine with breakthrough sorting technologies including the SORTEX® PolarVision™ detection system and new LED-Xenon lighting for unprecedented defect and foreign material detection.

The SORTEX F is custom built to be placed after IQF or in the packing line to remove gross and subtle colour defects, extraneous vegetable matter and hazardous foreign materials with market-leading results.

- Open frame with hygienic grade fixings
- Adjustable UHMW-PE chute
- InGaAs HD option
- Open receptacle
- Custom-built colour cameras
- SORTEX® PolarVision™ detection system
- PROfile™ (shape) technology
- LED-Xenon lighting
- 17inch touch screen, user interface
- ProSortX™ operating software
- Available in two frame sizes 600mm & 1200mm

In the packing line.

SORTEX® E1A

The SORTEX E1A offers consistent performance over a wide range of products and complex vegetable mixes with no changes to machine settings.

Efficient detection of packaging FM with Enhanced InGaAS technology removes plastic, wood and cardboard. High-speed ejectors efficiently remove defects with minimal loss of good product.

Colour measurement parameters can be adjusted to separate subtle colour differences; PROfile™ (shape) technology allows detection of defective material in real time through the measurement of multiple shape features on each object.

- Stainless steel frame for easy cleaning
- UHMW-PE chute
- Double sided detection
- Custom-built colour cameras
- High definition InGaAs® technology
- SORTEX PolarVision™ detection system
- PROfile™ (shape) technology
- 12.1inch touch screen, user interface
- ProSortX™ operating software
Fruit and Vegetables
Sorting Solutions
Innovative technologies.
Simplifying the most complex sort.

**SORTEX® PolarVision™ technology**

The specialist SORTEX PolarVision™ detection system brings together pioneering technologies for unprecedented, market leading foreign material removal. Innovative PolarCam™ technology targets the spectral and spatial differences between the commodity and foreign materials whilst new high-definition InGaAs™ cameras detect foreign materials in the near invisible infrared spectrum.

**Custom-built visible cameras**

Bühler’s high resolution colour cameras which are designed and custom-built in house remove gross and subtle colour defects from a variety of fruit and vegetable applications to increase product quality and uniformity.

**InGaAs™ HD technology**

The next generation infrared detection technology from Bühler now comes in high definition with double the resolution to detect foreign materials down to half the size. With twice as many pixels, InGaAs™ detects the smallest pieces of hazardous materials that cannot be seen in the visible spectrum for an added layer of assurance.
PROfile™ technology

PROfile™ technology can intelligently detect and virtually separate touching objects, allowing for higher capacity shape sorting. It can also use a combination of multiple shape parameters to remove stems and under or oversized products at the same time.

High-speed Ejectors and Ejector™

128 or 256 high speed, high flow ejectors efficiently remove defects and 600mm or 1200 mm viewing width ensures high product flow and low yield loss.

Ejector™ technology, Bühler’s most powerful ejectors, is now available on SORTEX E1D and SORTEX F optical sorters for precise removal of heavier objects such as stones, glass and product lumps.

SORTEX ProSortX™ operating software

The latest update of Bühler’s proprietary operating software comes with a fresh new interface that’s modern, clean and intuitive to use. Featuring innovative FingerTipControl™ and all-new Bühler ATOM™ board for faster processing and navigation between screens.

Bühler’s worldwide Customer Care organisation delivers the highest quality local support ensuring optical sorters perform at maximum possible efficiency, deliver optimum productivity and make the best return on investment.

The SORTEX Spare Parts promise.

Customer satisfaction is our priority. This is why we strive to deliver spare and wear parts within 48 hours, doing our best to limit your downtime and maximise your profitability.

For customers who require spare parts available on site, Bühler’s technologists have created appropriate spares kits for the different machinery available.
TotalCare™ Performance protection.

TotalCare™ allows customers to create their own service package, composed of individual service features that best suit their needs. Customers can create a tailored programme from a variety of packages. Contract options vary from basic to fully comprehensive cover. This way, investments can remain fully protected.

**TotalCare Protect**
Minimise Downtime
Based on an agreed number of annual visits, Bühler engineers will replace key wear parts, provide consultation and advise on future maintenance requirements.
Protecting Investment.

**TotalCare Perform**
Performance Optimisation
Aspiring to keep downtime to under 24 hours, sorters will be safeguarded against any failed components. Bühler engineers will ensure first-rate performance once the repair is carried out.
Repair and Optimise.

**TotalCare PerformPLUS**
Ejector Refurbishment
Making certain that sorters are running at peak performance, ejectors are replaced when the stipulated life-cycle is reached.
Performance is maintained for the future.
Maximum Capacity and Quality.

**TotalCare Anyware**
Supervised Functionality
Provides a working record of operational information as well as reports that enable machine health to be monitored and preventative maintenance scheduled.
Maintain Optimised Performance.

**TotalCare AnywarePRO**
Remote Access and Assistance
Sorter performance can be viewed remotely by customers and Bühler engineers. Faults can be diagnosed and performance optimised in any location using a laptop, tablet or smartphone.
Ultimate control.

* All contracts are available for variable durations

**SORTEX upgrade kits.**

Suitable for those who are seeking to upgrade sorters with an additional module, new features or software updates.

New technologies and innovations are continuously in development. Upgrade kits allow customers with existing machinery to enhance their production line with the very latest proprietary optical sorting technology.
