Bühler - your partner in rice processing.

Bühler is the global leader in the supply of industrial rice processing systems. In addition to competent consulting, Bühler is your reliable partner who will bear overall responsibility for designing, constructing and starting-up your installation. With extensive experience in rice processing and process engineering in conjunction with research and development, Bühler offers high profitability at low operating costs. References from all parts of the world testify over a hundred years of experience to our dependable global customer service.

Technology (R&D)
Bühler’s technological leadership is based on intensive research and development with a strong emphasis on the highest possible quality in the rice milling industry. Bühler maintains a partnership with many universities and research institutes. Bühler’s engineers and technicians work hand in hand with research scientists on the development of new technologies and their application in our processes.

Engineering
The most professional engineering staff in our headquarters and around the world will take care of your project with an expertise no other supplier can offer you. This ensures an optimised planning for your installation. You can benefit from years of experience and project management skills, which will lead to a speedy and smoother project realisation allowing you to reduce your overall costs.

Installation / Commissioning / Services
Bühler performance does not end with the delivery of machines. We offer erection and commissioning by our own specialists. Thereby, a professional on schedule installation and start-up of your project will be guaranteed. At the same time, your operating personnel will be trained on the job.

Even after handover of the plant, our experienced service personnel will continue to offer any advice you may need in order to optimise your plant and ensure the availability of spare parts over the coming years.

A Bühler rice mill will give optimised yield, low breakage and a consistent high quality product at lowest costs.
Polisher polishes rice to a pearly high gloss luster.

Whitener processes rice to a sparkling white in several passes.

Drum Grader grades rice by thickness.

Table Separator separates unhusked kernels from brown rice.

Huller shells paddy, separates the hulls and kernels into two fractions.

SmartPoly Plan Sifter removes small brokens.

TopWhite HighPoly UltraPoly SuperPoly UltraWhite Whitening & Polishing

Classifier Ultratrier

Bühler equipment are designed and engineered to maximise the yield of head rice at every stage of rice processing.

Bühler – your partner in rice processing.

Bühler is the global leader in the supply of industrial rice processing systems. In addition to competent consulting, Bühler is your reliable partner who will bear overall responsibility for designing, constructing and starting-up your installation. Many years of experience in grain processing and process engineering in conjunction with research and development, offer customers high profitability at low operating costs. References from all parts of the world testify to over one hundred years of experience to our dependable global customer service.

Technology (R&D)

Bühler’s technological leadership is based on intensive research and development with top priority in the highest yields and excellent quality, as well as on the synergies with many Bühler technologies in other fields of grain processing. Highly qualified technologists in our various R&D facilities will jointly develop the overall process based on your specific needs. For new applications, our R&D facilities can be of service to you.

Engineering

The most professional engineering staff in our headquarters and around the world will take care of your project with an expertise no other supplier can offer you. This ensures an optimised planning for your installation. You can benefit from years of experience and project management skills, which will result in a speedy and smoother project realisation allowing you to reduce your overall costs.

Automation

Bühler’s scope of engineering and supply comprises the design and delivery of electrical control systems and plant automation. The performance of the plant and the plant availability can be improved with pre-active operator guidance. Consistent high product quality can be achieved thanks to the control and monitoring of the process resulting in less breakages and more productivity of your mill.

Manufacturing

Bühler manufactures the full range of rice processing equipment in its own workshops. This ensures a high standard of quality of materials and workmanship that gives the necessary feedback into R&D for continuous optimising of our products. Bühler factories work to the highest quality standards, which amongst others, also include ISO 9001 certification.
