

# WinCos® PocketPlant

With PocketPlant, remote monitoring of the plant's production lines becomes an easy task. Drilling down from the action-oriented home screen to identify line errors or to assign responsibilities is simple. It provides the edge necessary to keep the plant's uptime high.

## Line monitoring in the palm of your hand

### Remote and fast monitoring of line states

PocketPlant is a service that offers the convenience of continuously monitoring production lines anywhere, anytime and on any mobile device. It is based on Bühler's plant control system WinCos® and provides a mobile application in which the service is running.

### Improved plant uptime thanks to fast intervention

In order for operating staff to stay informed and take accurate decisions, PocketPlant offers many valuable features, such as

- Process warnings and alarms
- Process events with focus on operator action
- Visualization of the monitored production lines
- E-mail or SMS notification on relevant events, including escalation function
- Detailed log and statistics of relevant events for search and comparison
- User and escalation level configuration on the device

### Increased mobility and flexibility for operating staff

PocketPlant allows production staff to move freely inside or outside the plant, without losing their production lines out of sight. Mobility is increased significantly and the added flexibility allows the undisturbed performing of other relevant work tasks.

#### Benefits

- Remote and fast monitoring of line states
- Improved plant uptime thanks to fast intervention
- Increased mobility and flexibility for operators
