Homogeneous mixing for top product quality

**Hygienic and efficient**

When producing premixes and ready mixes, top sanitation and consistent mixing quality with maximum homogeneity are crucial.

The Bühler Sanimix combines all the benefits of a high-capacity and efficient batch mixer. The paddle mixer is suitable for mixing powders, flakes, and whole grains. The chopper mixer ensures outstanding end product homogeneity when used with liquid, pasty and solid ingredients, such as shortening, for example.

**Maximum homogeneity**

The mixing trough and tools are optimally matched and ensure consistent, reproducible mixes and top end product quality.

**Top sanitation**

The gapless, self-discharging mixing chamber prevents product cross-contamination. With its large service door, Sanimix is particularly easy to access and clean – an optimal basis for highest sanitation requirements.

**Benefits**

- Maximum homogeneity
- Top sanitation
- Short mixing and discharge times
- Sturdy stainless steel design

Innovations for a better world.
Universally applicable
For individual requirements

Short mixing and discharge times
The horizontal mixing process and the large outlet door reduce the mixing and discharge times and increase your productivity.

Sturdy stainless steel design
Sanimix’s rugged construction is perfectly designed to absorb the forces inside the mixer. You can depend on maximum reliability and a long service life.

Options
- Liquids injection
- Scale version
- Upper and lower surge hopper
- Product temperature monitoring
- Recirculation mode

Surface finish (mixing chamber)
- Standard (mill finish)
- Polished (mirror-polished)
