

Bag Packing Control System.

MEAG-P

Reliable bag packing control system. Stable and robust control.

Application:

The bag packing control system MEAG-P ensures efficient control of bag packing systems. This integrated control system of Bühler allows centralized control of all process units from the bagging bin to finished bag. The module enables flexible and user-friendly system operation: It registers the bin discharging and product supplies, all scales including their filling, and in addition comprises the bag packing and closing units as well as the bag conveyor.

The individual control units of the various components are combined in the bag packing control system MEAG-P.

Customer value:

- Reliable process control
- Centralized control system
- User-friendly operation
- High flexibility

Consistent operating concept. User-friendly operation.

Easy operation

Integration of bag packing and scale control in a single system reduces complexity and increases user friendliness.

High operating reliability

The bag packing control system MEAG-P is a robust and reliable solution: Its hardware is insensitive to dust and resistant to vibrations and temperature influences. The software has been designed with the specific needs in mind and offers a high degree of stability.

Sustainable concept offering high flexibility

Integration of the individual components in a complete control system is the great strength of the bag packing control system MEAG-P. In addition to Bühler components products, it is also possible to incorporate non-Bühler equipment in the control system. MEAG-P thus offers additional value and can be integrated via Profibus, digital, analog, or serial interfaces in master process control systems. As a result, control system is distinguished as a particularly flexible and sustainable solution.
