

Twin-screw feeder.

MWSQ

High product throughput. Accurate feeding.

Twin-screw feeder
suspended from ceiling.

Twin-screw feeder
supported on floor.

Application

The MWSQ twin-screw supplies feeds powdered products to bagging scales. Its mode of feed is divided into fast and dribble flow, resulting in both a high product throughput and an accurate desired weight.

Design

The inlet geometry ensures uniform product feed. Horizontal louvers incorporated in the outlet and a quick-action three-phase brake for controlling the dribble flow enable neat cut-off of the product flow. Frequency-controlled fast flow allows the selection of the right throughput and quantity for a wide variety of products and bag weights.

Features

- Accurate feed rate
- Wide throughput range
- High sanitation
- High operating reliability
- Easy operation and maintenance

Consistent product feeding.
Exact weights.
